

OSGeo, Community & Project Steering Committee

What does community think about Oskari?

“The current Oskari Network Steering Group is suitable for what it was created for - upper level planning. In the future there should be also individuals involved and technical discussion should be conducted somewhere else.”

“Oskari has a lot of potential, it should be packaged so that you can easily create a new instance, like pushing a button. You can easily forgive things, if it easily configurable”.

“We are eager to find out if we could develop some components together with other projects, but how can we inform everybody about our 60 little improvement ideas?”

Oskari into OSGeo incubation project?

OSGeo= Open Source Geospatial Foundation promotes interaction between users, developers, and community participants.

Incubation phase prepares a geospatial open source software & community to become part of OSGeo projects

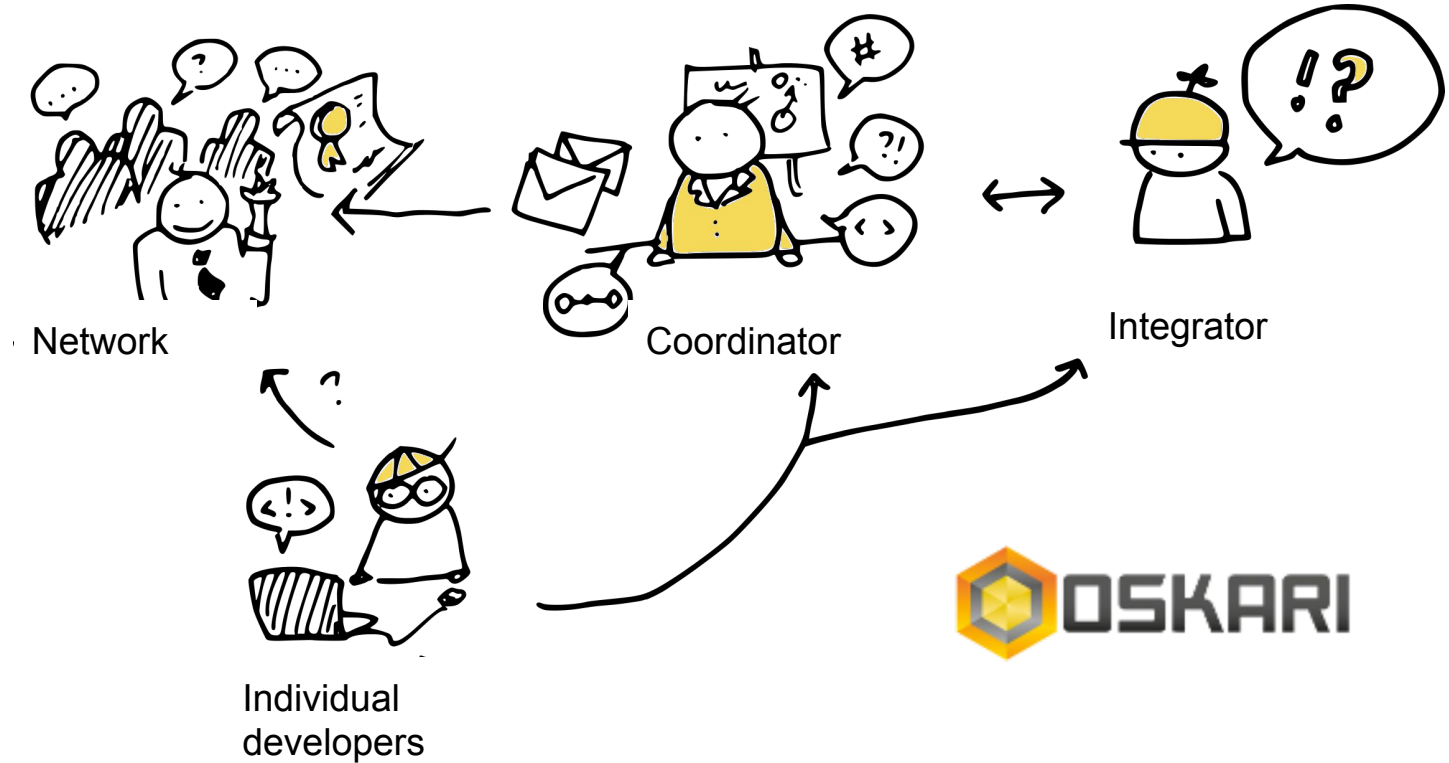

Copyright to individual contributions in foundation projects is expected to remain with the original developer. However, assigning copyright to the foundation is an available option.

- International visibility
- Sign of stability
- Possibility to get software part of OSGeo Live package

Steps towards OSGeo

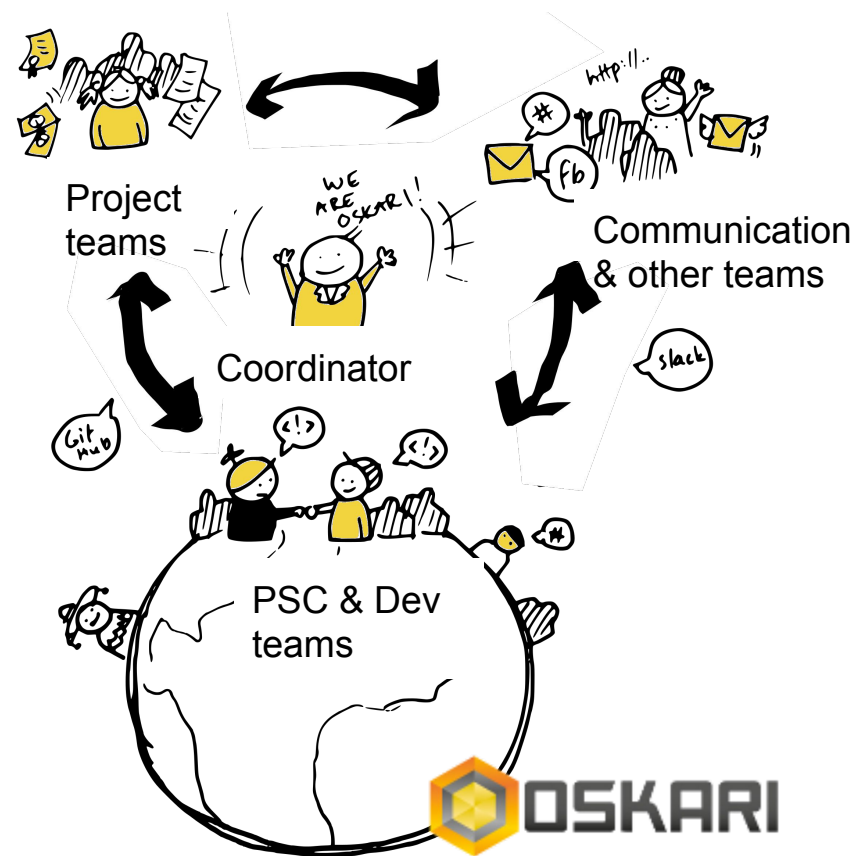

- Arrange softwares technical roadmap & processes openly
 - Email-list > coming up, possibly through OSGeo
 - Discussion forum > Slack
 - Issue tracking > Github
 - Roadmap > [Github wiki](#) / or issues? (Oskari Improvement Proposals)
 - [Project Steering Committee](#)
- Ask permissions from contributors - signed CLAs from all contributors or permission to publish their names on a website
- [Apply for incubation project](#) (possible mentor Arnulf Christl)

Community now

Community in the future

- We need more coordination between projects (real joint development)
- We need PSC to act as technical steering group and
 - Take care of the Roadmap
 - Discuss about new feature proposals
 - Approve new features to Oskari
- We need to provide friendly environment for the community and welcome all contributors (coders, project owners, communication professionals, users etc.)

Oskari Community & PSC & Roadmap
